CLASSIC  
STICK-BUILT GLAZING

# CLASSIC

As your business grows and changes, your workspace needs to evolve along with it. Partition Systems has been helping businesses adapt to their changing organizational needs since 1970. Classic glazing allows you to reimagine and redefine your floorplan to meet your organization's changing needs. Whether you desire a collaboration space or more privacy, an updated look or a more efficient workflow, Classic can help achieve your incredible space. The stick-built panels, made of aluminum framing and glass, are infinitely customizable and allow you to create a personalized work environment quickly, efficiently and affordably.

## CLASSIC

Classic stick-built glazing is constructed from readily available materials that are measured and cut on-site, allowing for a quick installation that fits with your vision. Units can stand freely or be integrated with the existing architecture. Separate glass with vertical mullions or use a butt-jointed method to achieve a seamless look.

### Features

-  Single trade install
-  Components can be partially reconfigured for reuse
-  Less than one-week lead time for standard orders
-  Multiple options for sound insulation and privacy
-  Clear anodized or powder coated aluminum finishes available
-  Tempered or laminated glass in 6 mm, 10 mm, and 12 mm
-  Compatible with all Vision series doors
-  Frames are Canadian made and manufactured in Alberta
-  Can contribute to LEED credits

Classic stick-built glazing allows you to partition off workrooms and offices while maintaining an open floorplan and uninterrupted flow of light. Sturdy double aluminum doors can be combined with butt-jointed glass for a continuous effect.

## Don't Wait for Manufacturing

Classic glazing partitions are constructed from materials that are stocked locally in distribution centres throughout Western Canada. With most standard components readily available, your contractor simply needs to measure and cut the materials to your specifications, and the installation can start right away.

Note: Vision series doors and door frames require three to four weeks for delivery.

### **Environmentally Conscious**

When your office is ready for another change, the Classic components can be disassembled and contribute materials to the new look, leading to less waste and a reduced cost. What's more, our glass options allow for more natural light to reach the interior of your office space. These features can contribute LEED credits to your building, ensuring energy efficiency, reduced resource costs, and a bright, clean workspace for employees.

## Acoustically Secure

Depending on your privacy needs, you can mix-and-match 6 mm, 10 mm, and 12 mm tempered or laminated glass for higher levels of sound insulation. Our experts will work with you to determine which specifications are right for your workspace. By using the right glass, you can ensure a distraction-free office where privacy is maintained.

### A Custom Look

Versatile and adaptable, Classic partitions are ready to conform to your organization's visual style. Choose between clear anodized aluminum frames or opt for a custom powder coated finish to accent your brand. Further tailor your look with glass-frosting options.

Complement your framing with matching doors. Choose between hinged, pivot swing or sliding barn doors, depending on the form and function of each space you create. By combining different styles and layout options, you'll be able to transform any room into an incredible workspace.

Custom vinyl applications allow you to showcase your brand, while double sliding barn doors create a flexible space that can be opened up to common areas or closed off for more privacy during meetings.
